D. a was motto for
14. The cat _____ on the fireplace mantle.
A. was sound asleep
B. was sound sleep
C. was sound sleeping
D. was sound in sleep
15. The family _____ to Europe.
A. documented there travels
B. documented travels
C. documented their travels
D. documented there travel
16. Thousands _____ in the flood.
A. face mandatory evacuations
B. face mandatory evacuated
C. are face mandatory evacuating
D. are face mandatory evacuates
17. _____, my grandmother walks along the beach.
A. Once a blue moon
B. Once blue moon
C. Once in blue moon
D. Once in a blue moon

18. Citizens of Franklin Cove _____ fire.
- A. woke up in zone
 - B. woke up zone of
 - C. woke up in the zone of
 - D. woke up in zone of
19. “One way or another, _____ !” The mayor responded.
- A. we will get job done
 - B. we will get the job done
 - C. we will get done
 - D. we will get job do
20. _____, it is difficult to concentrate.
- A. Even in quietest moment
 - B. Even in the quiet moment
 - C. Even in quiets moments
 - D. Even in the quietest moments

問題 B 次の文章を読んで各質問に対してもっとも適切な答えをA～Dから選び,それぞれ解答欄に記号で答えなさい。

Food loss is the case where, for one reason or another, food items are taken out of the production chain. Much of the loss of food occurs during the production (growing food on farms), or processing (turning crops into food products) stages. Food waste, on the other hand, is food that is not consumed and is therefore thrown away. Food waste occurs mainly in the distribution (supplying a population with food), sales (selling food in markets), and consumption (eating by humans) phases. Food waste also includes skins, rinds, seeds, and other things said to be inedible by humans. For decades, many of these items were burned or put in landfills. In the United States, food that is not eaten is called plate waste and is generated by homes, businesses, government offices, and schools the world over on a daily basis. Alas, much of this food, too, gets burned or placed in landfills.

There are millions of cases of food loss and food waste, with the number rising steadily. We as humans have learned how to grow and cultivate food through agricultural processes, ship it to thousands of people across the world, store it for days on shelves, and sell it in supermarkets. However, the human race is still suffering from massive food loss and food waste the world over. Why is this so?

Overall, it is said that around one third of all the food produced in the world is thrown away. In fact, an additional one third is lost to human food that is fed to animals as animal feed. Some things that are not considered food loss are inedible parts of animals and plants but are considered food waste, as are food products that are discarded by supermarkets due to poor color and appearance.

Food loss arises in unused products from the agricultural sector like unharvested crops. Some food loss occurs through cooking loss, natural shrinkage, loss to mold, pesticide usage, or poor climate control.

Whichever it is called, food is important and should not be wasted or lost and can only be controlled by a commitment to prevention of food loss. This can be achieved by education and responding positively to food waste prevention initiatives.

Question 1. What is the best title for this article?

- A. Food Waste and Animal Feed
- B. An Introduction to Harvesting
- C. The Problem of Food Loss and Food Waste
- D. Food Loss and Unharvested Crops

Question 2. Where does the article say food loss mainly occurs?
